Journal of Cellular Plastics

Subject and Title Index vol. 13, 1977

Adduct Isocyanurate
Factors Affecting Fatigue in HR Adduct Foam – Statistically Oriented Preparation and Evaluation, *Jan./Feb., p. 48*

Aluminum Trihydrate
Flame and Smoke Properties of the Polyphosphazenes. III. Polyaryloxphosphazene Copolymer Foams, *Mar./Apr. p. 96*

Amine Catalysts
The Use of Silicone Surfactants and Amine Catalysts To Vary Processing and Properties of Various Urethane Foam Systems, *May/June, p. 182*
Formulating Principles for High-Density, High-Resilience Slabstock Urethane Foam, *Sept./Oct., p. 340*

Applications
History of Structural Foam, *May/June, p. 178*
Technology and Application of "Polymer Polyol" Based, Low Density, High Resilience (HR) Slabstock Foam in Europe, *May/June, p. 198*

Blowing Agents
Auxiliary Blowing Agents for Flexible Polyurethane Foams, *Jan./Feb. p. 57*

Carbodiimide
Modified Isocyanurate Foams – Part III, *Nov./Dec., p. 399*

Catalyst
Factors Affecting Fatigue in HR Adduct Foam – Statistically Oriented Preparation and Evaluation, *Jan./Feb., p. 48*

Cellular Plastics
Polyisocyanurate Foams Having Low Friability and Flame Spread, *Jan./Feb., p. 21*

Chemistry of PU-Foams
Cell-Opening in One-Shot Flexible Polyether Based Polyurethane Foams. The Role of Silicone Surfactant and its Foundation in the Chemistry of Foam Formation, *Jan./Feb., p. 26*

Coatings
A Comparison and Evaluation of the Test Results Obtained on Exposed Coated Rigid Urethane When Subjected to Large-Scale Corner and Compartment Corner Testing, *Mar./Apr., p. 102*

Combustibility
A Comparison and Evaluation of the Test Results Obtained on Exposed and Coated Rigid Urethane Foam When Subjected to Large-Scale Corner and Compartment Corner Testing, *Mar./Apr., p. 102*
Modified Isocyanurate Foams, Part II, *July/Aug., p. 276*
Modified Isocyanurate Foams – Part III, *Nov./Dec., p. 399*

Composites
Improving Properties in Rigid Urethane Foams Using Glass Bubbles, *Nov./Dec., p. 383*

Computer
Microcellular Elastomers by Computer Techniques Formulations and Properties, *Jan./Feb., p. 36*

Corner Testing
A Comparison and Evaluation of the Test Results Obtained on Exposed and Coated Rigid Urethane Foam When Subjected to Large-Scale Corner and Compartment Corner Testing, *Mar./Apr., p. 102*

Crosslinkers
New Crosslinkers in the Development of High Resilience Polyurethane Foams, *Jan./Feb., p. 42*
High Resilient Slabstock Foam Made with Crosslinkers, *May/June, p. 194*

Design, With Structural Foam
Part Design. Polyurethane Structural Foam, *Nov./Dec., p. 393*

Dynamic Surface Tension
Aspects of the Surface Chemistry of Phenolic Foam Formations, *July/Aug., p. 264*

Elastomeric Shoe-Soles
New Polyether Polyol for Production of Elastomeric Shoe-Soles, *Sept./Oct., p. 320*

Elastomers
Microcellular Elastomers by Computer Techniques Formulations and Properties, *Jan./Feb., p. 36*

Emulsification
Aspects of the Surface Chemistry of Phenolic Foam Formations, *July/Aug., p. 264*

Energy Conservation
Formulating Principles for High-Density, High-Resilience Slabstock Urethane Foam, *Sept./Oct., p. 340*

Europe
Technology and Application of "Polymer Polyol" Based, Low Density, High Resilience (HR) Slabstock Foam in Europe, *May/June, p. 198*

Experimental Design
Microcellular Elastomers by Computer Techniques Fromulations and Properties, *Jan./Feb., p. 36*

Extruded Structural Foam
Extruded Structural Foam Profiles: Structure vs. Properties, *Nov./Dec., p. 388*

Fatigue Resistance
Factors Affecting Fatigue in HR Adduct Foam – Statistically Oriented Preparation and Evaluation, *Jan./Feb., p. 48*

Fiber Reinforced Foam
Failure Mechanisms in Fibre Reinforced

Rigid Polyurethane Foam, *July/Aug., p. 240*

Fire Test Methods
Relative Toxicity and Flash Fire Propensity of the Pyrolysis Gases from Polyurethane Foams, *Nov./Dec., p. 408*

Flame Retardance
New Silicone RTV Foam, *Jan./Feb., p. 62*
Flame and Smoke Properites of the Polyphosphazens. III. Polyaryloxyphosphazene Copolymer Foams, *Mar./Apr., p. 96*
Modified Isocyanaurate Foams, Part II, *July/Aug., p. 276*

Flame Spread
Polyisocyanurate Foams Having Low Friability and Flame Spread, *Jan./Feb., p. 21*

Flash Fire Propensity
Relative Toxicity and Flash Fire Propensitv of the Pyrolysis Gases from Polyurethane Foams, *Nov./Dec., p. 408*

Flexible Foam
Auxiliary Blowing Agents for Flexible Polyurethane Foams, *Jan./Feb., p. 57*
Flame and Smoke Properties of the Polyphosphazenes. III. Polyaryloxyphosphazene Copolymer Foams, *Mar./Apr., p. 96*
Graphic Method of Evaluation of Polyols for Flexible Slabstock Polyurethane Foams, *Mar./Apr., p. 128*

Foam Formation
Cell-Opening in One-Shot Flexible Polyether Based Polyurethane Foams. The Role of Silicone Surfactant and its Foundation in the Chemistry of Foam Formation, *Jan./Feb., p. 26*

Foam Plastic
Moisture Gains by Foam Plastic Roof Insulations Under Controlled Temperature Gradients, *Sept./Oct., p. 313*

Foams
Polyisocyanurate Foams Having Low Friability and Flame Spread, *Jan./Feb., p. 21*
New Silicone RTV Foam, *Jan./Feb., p. 62*
Flame and Smoke Properties of the Polyphosphazenes. III. Polyaryloxyphosphazene Copolymer Foams, *Mar./Apr., p. 96*
Modified Isocyanurate Foams, Part II, *July/Aug., p. 276*
Quick Setting Foam, *Sept./Oct., p. 327*

Foams, Ionic Elastomers
Novel Flexible Foams Based on an Ionic Elastomer, *July/Aug., p. 270*

Formulation
Microcellular Elastomers by Computer Techniques Formulations and Properties, *Jan./Feb., p. 36*

Friability
Modified Isocyanurate Foams – Part III, *Nov./Dec., p. 399*

Furniture, Urethane Foam
Structural Urethane Foam in the Upholstered Furniture Industry, *July/Aug., p. 261*

Glass
Improving Properties in Rigid Urethane Foams Using Glass Bubbles, *Nov./Dec., p. 383*

High Pressure Foaming
Urethane Foaming Technique with High Pressure Units, *Nov./Dec., p. 404*

High Resilience Foams
New Crosslinkers in the Development of High Resilience Polyurethane Foams, *Jan./Feb., p. 42*

HR Foam
Factors Affecting Fatigue in HR Adduct Foam – Statistically Oriented Preparation and Evaluation, *Jan./Feb., p. 48*
High Resilient Slabstock Foam Made with Crosslinkers, *May/June, p. 194*
Technology and Application of "Polymer Polyol" Based, Low Density, High Resilience (HR) Slabstock Foam in Europe, *May/June, p. 198*
The Improvement of Humidity Resistance in High Resilient Polyurethane Foams, *May/June, p. 203*

Humidity Resistance
The Improvement of Humidity Resistance in High Resilient Polyurethane Foam, *May/June, p. 203*

Insulation
Polyisocyanurate Foams Having Low Friability and Flame Spread, *Jan./Feb., p. 21*
Moisture Gains by Foam Plastic Roof Insulations Under Controlled Temperature Gradients, *Sept./Oct., p. 313*

Insulation, LNG Tanks
Automated Insulation of Spherical Tank LNG Ships by the Spiral Generation Process, *July/Aug., p. 245*

Ionic Elastomeric Foams
Novel Flexible Foams Based on an Ionic Elastomer, *July/Aug., p. 270*

Isocyanurate Foams
Modified Isocyanurate Foams – Part III, *Nov./Dec., p. 399*

Isocyanurates
Polyisocyanurate Foams Having Low Friability and Flame Spread, *Jan./Feb., p. 21*

Japan, Structural Foam Markets
Market Development of Structural Foam in Japan, *Mar./Apr., p. 118*

Low Density
Technology and Application of "Polymer Polyol" Based, Low Density, High Resilience (HR) Slabstock Foam in Europe, *May/June, p. 198*

Low Pressure Injection Molding
History of Structural Foam, *May/June, p. 178*

Low Smoke
Flame and Smoke Properties of the Polyphosphazenes. III. Polyaryloxyphosphazene Copolymer Foams, *Mar./Apr., p. 96*

Materials Flammability
Relative Toxicity and Flash Fire Propensity of the Pyrolysis Gases from Polyurethane Foams, *Nov./Dec., p. 408*

Microcellular
Microcellular Elastomers by Computer Techniques Formulations and Properties, *Jan./Feb., p. 36*

Microcellular Foams
Processing and Properties of a Microcellular Foam System with Low Sensitivity to Temperature, *July/Aug., p. 255*

Microspheres
Improving Properties in Rigid Urethane Foams Using Glass Bubbles, *Nov./Dec., p. 383*

Moisture
Moisture Gains by Foam Plastic Roof Insulations Under Controlled Temperature Gradients, *Sept./Oct., p. 313*

Molded Flexible Urethane Foam
Formulating Principles for High-Density, High-Resilience Slabstock Urethane Foam, *Sept./Oct., p. 340*

NBS Smoke Density Test
Flame and Smoke Properties of Polyphosphazenes. III. Polyaryloxphosphazene Copolymer Foams, *Mar./Apr., p. 96*

Oxazolidin-2-One
Modified Isocyanurate Foams – Part III, *Nov./Dec., p. 399*

Oxygen Index
Flame and Smoke Properties of the Polyphosphazenes. III. Polyaryloxphosphazene Copolymer Foams, *Mar./Apr., p. 96*

Permeability
Moisture Gains by Foam Plastic Roof Insulations Under Controlled Temperature Gradients, *Sept./Oct., p. 313*

Phenoloic Foam
Aspects of the Surface Chemistry of Phenolic Foam Formations, *July/Aug., p. 264*

Platinum Catalysis
New Silicone RTV Foam, *Jan./Feb., p. 62*

Pneumacel, Cushioning Mechanism
Polyester Pneumacel: Load Compression Behavior and Cushioning Mechanism, *May/June, p. 164*

Pneumacel, Dynamic Impact Properties
Polyester Pneumacel: Dynamic Impact Properties and Mechanical Behavior, *May/June, p. 169*

Pneumacel, Fabricating Methods
Polyester Pneumacel: Versatile Molding Processes and Fabrication Methods, *May/June, p. 173*

Pneumacel, Load Compression Properties
Polyester Pneumacel: Load Compression Behavior and Cushioning Mechanism, *May/June, p. 164*

Pneumacel, Mechanical Behavior
Polyester Pneumacel: Dynamic Impact Properties and Mechanical Behavior, *May/June, p. 169*

Pneumacel, Molding Methods
Polyester Pneumacel: Versatile Molding Processes and Fabrication Methods, *May/June, p. 173*

Pneumacel Versus Polyurethane
Polyester Pneumacel: Load Compression

Behavior and Cushioning Mechanism, *May/June, p. 164*
Polyester Pneumacel: Dynamic Impact Properties and Mechanical Behavior, *May/June, p. 169*
Polyester Pneumacel: Versatile Molding Processes and Fabrication Methods, *May/June, p. 173*

Polyester Pneumacel
Polyester Pneumacel: Load Compression Behavior and Cushioning Mechanism, *May/June, p. 164*
Polyester Pneumacel: Dynamic Impact Properties and Mechanical Behavior, *May/June, p. 169*
Polyester Pneumacel: Versatile Molding Processes and Fabrication Methods, *May/June, p. 173*

Polyether Manufacture
The Economics of A Polyether Plant, *Mar /Apr., p. 111*

Polyethers
The Economics of A Polyether Plant, *Mar /Apr., p 111*

Polyisocyanurate
Modified Isocyanurate Foams, Part II, *July/Aug., p. 276*

Polymer Polyols
Technology and Application of "Polymer Polyol" Based, Low Density, High Resilience (HR) Slabstock Foam in Europe, *May/June, p. 198*

Polyol, Elastomeric
New Polyether Polyol for the Production of Elastomeric Shoe-Soles, *Sept./Oct., p. 320*

Polyols
New Crosslinkers in the Development of High Resilience Polyurethane Foams, *Jan./Feb., p. 42*
Factors Affecting Fatigue in HR Adduct Foam – Statistically Oriented Preparation and Evaluation, *Jan./Feb., p. 48*
The Economics of A Polyether Plant, *Mar./Apr., p. 111*

Polyols Evaluation
Graphic Method of Evaluation of Polyols for Flexible Slabstock Polyurethane Foams, *Mar./Apr., p. 128*

Polyols Manufacture
The Economics of A Polyether Plant, *Mar./Apr., p. 111*

Polyphosphazene
Flame and Smoke Properties of the Polyphosphazenes. III. Polyaryloxyphosphazene Copolymer Foams, *Mar./Apr., p. 96*

Polystyrene Bead Foam
A New Potting Material – Expandable Polystyrene Bead Foam, *Sept./Oct., p. 347*

Polystyrene Foam
Automated Insulation of Spherical Tank LNG Ships by the Spiral Generation Process, *July/Aug., p. 245*

Polyurethane
Microcellular Elastomers by Computer Techniques Formulations and Properties, *Jan./Feb., p. 36*
Graphic Method of Evaluation of Polyols for Flexible Slabstock Polyurethane Foams, *Mar./Apr., p. 128*
Quick Setting Foam, *Sept./Oct., p. 327*

Polyurethane Foams
Cell-Opening in One-Shot Flexible Polyether Based Polyurethane Foams. The Role of Silicone Surfactant and its Foundation in the Chemistry of Foam Formation, *Jan./Feb., p. 26*
New Crosslinkers in the Development of High Resilience Polyurethane Foams, *Jan./Feb., p. 42*

Polyurethane Versus Pneumacel
Polyester Pneumacel: Load Compression Behavior and Cushioning Mechanism, *May/June, p. 164*
Polyester Pneumacel: Dynamic Impact Properties and Mechanical Behavior, *May/June, p. 169*
Polyester Pneumacel: Versatile Molding Processes and Fabrication Methods, *May/June, p. 173*

Potting Material, Polystyrene Foam
A New Potting Material – Expandable Polystyrene Bead Foam, *Sept./Oct., p. 347*

Processing
History of Structural Foam, *May/June, p. 178*
Technology and Application of "Polymer Polyol" Based, Low Density, High Resilience (HR) Slabstock Foam in Europe, *May/June, p. 198*

Quick Setting Foam
Quick Setting Foam, *Sept./Oct., p. 327*

Rapid Demold
Formulating Principles for High-Density, High-Resilience Slabstock Urethane Foam, *Sept./Oct., p. 340*

Regression Analysis
Microcellular Elastomers by Computer Techniques Formulations and Properties, *Jan./Feb., p. 36*

Rigid Urethane Testing
A Comparison and Evaluation of the Test Results Obtained on Exposed and Coated Rigid Urethane Foam When Subjected to Large-Scale Corner and Compartment Corner Testing, *Mar./Apr., p. 102*

RIM, Production Economics
Economics of a RIM-Production, *Mar./Apr., p. 133*

RTV Silicone Rubber
New Silicone TRV Foam, *Jan./Feb., p. 62*

Shoe Sole
Microcellular Elastomers by Computer Techniques Formulations and Properties, *Jan./Feb., p. 36*
Flexible Microcellular Polyurethane for Shoe Soles, *Sept./Oct., p. 333*

Silicone Glycol Block Copolymers
Aspects of the Surface Chemistry of Phenolic Foam Formation, *July/Aug., p. 264*

Silicone Surfactants
Cell-Opening in One-Shot Flexible Polyether Based Polyurethane Foams. The Role of Silicone Surfactant and its Foundation in the Chemistry of Foam Formation, *Jan./Feb., p. 26*
New Crosslinkers in the Development of High Resilience Polyurethane Foams, *Jan./Feb., p. 42*
The Use of Silicone Surfactants and Amine Catalysts To Processing and Properties of Various Urethane Systems, *May/June, p. 182*

Silicones
Cell-Opening in One-Shot Flexible Polyether Based Polyurethane Foams. The Role of Silicone Surfactant and its Foundation in the Chemistry of Foam Formation, *Jan./Feb., p. 26*
New Silicone RTV Foam, *Jan./Feb., p. 62*

Siloxane-Polyether Copolymers
Cell-Opening in One-Shot Flexible Polyether Based Polyurethane Foams. The Role of Silicone Surfactant and its Foundation in the Chemistry of Foam Formation, *Jan./Feb., p. 26*

Slabstock
Graphic Method of Evaluation of Polyols for Flexible Slabstock Polyurethane Foams, *Mar./Apr., p. 128*

Slabstock, Urethane
High Resilient Slabstock Foam Made with Crosslinkers, *May/June, p. 194*

Smoke, NBS Smoke Chamber
Flame and Smoke Properties of the Polyphosphazenes. III. Polyaryloxyphosphazene Copolymer Foams, *Mar./Apr., p. 96*

Spiral Generation Process
Automated Insulation of Spherical Tank LNG Ships by the Spiral Generation Process, *July/Aug., p. 245*

Spray Foam
Quick Setting Foam, *Sept./Oct., p. 327*

Statistical Study
Factors Affecting Fatigue in HR Adduct Foam – Statistically Oriented Preparation and Evaluation, *Jan./Feb., p. 48*

Structural Foam
History of Structural Foam, *May/June, p. 178*

Structural Foam, Extruding
Extruded Structural Foam Profiles: Structure vs. Properties, *Nov./Dec., p. 388*

Structural Foam, Urethane
Structural Urethane Foam in the Upholstered Furniture Industry, *July/Aug., p. 261*
Part Design. Polyurethane Structural Foam, *Nov./Dec., p. 393*

Structure: Property Relationships
Extruded Structural Foam Profiles: Structure vs. Properties, *Nov./Dec., p. 388*

Thermoplastic
History of Structural Foam, *May/June, p. 178*

UL Room Compartment Testing
A Comparison and Evaluation of the Test

Results Obtained on Exposed and Coated Rigid Urethane Foam When Subjected to Large-Scale Corner and Compartment Corner Testing, *Mar./Apr., p. 102*

Union Carbide
History of Structural Foam, *May/June, p. 178*

Upholstery Materials
Cell-Opening in One-Shot Flexible Polyether Based Polyurethane Foams. The Role of Silicone Surfactant and its Foundation in the Chemistry of Foam Formation, *Jan./Feb., p. 26*
New Crosslinkers in the Development of High Resilience Polyurethane Foams, *Jan./Feb., p. 42*

Urethane
Polyisocyanurate Foams Having Low Friability and Flame Spread, *Jan./Feb., p. 21*
Microcellular Elastomers by Computer Techniques Formations and Properties, *Jan./Feb., p. 36*
Improving Properties in Rigid Urethane Foams Using Glass Bubbles, *Nov./Dec., p. 383*

Urethane Foam, Fiber Reinforced
Failure Mechanisms in Fibre Reinforced Rigid Polyurethane Foam, *July/Aug., p. 240*

Urethane Foam, Microcellular
Processing and Properties of a Microcellular Foam System with Low Sensitivity to Temperature, *July/Aug., p. 255*

Urethane Formulation
Quick Setting Foam, *Sept./Oct., p. 327*

Urethane Foams
A Comparison and Evaluation of the Test Results Obtained on Exposed and Coated Rigid Urethane Foam Subjected to Large-Scale Corner and Compartment Corner Testing, *Mar./Apr., p. 102*
The Use of Silicone Surfactants and Amine Catalysts To Vary Processing and Properties of Various Urethane Foam Systems, *May/June, p. 182*
Improving Properties in Rigid Urethane Foams Using Glass Bubbles, *Nov./Dec., p. 383*
